

Rise to the demand

Earn a premium for non-GMO grain production

The consumer appetite to know more about where their food comes from is driving demand for more transparent labelling and a desire for foods labelled as non-genetically modified (non-GMO). Through connections with end use customers, Cargill sees this as an opportunity to meet the growing demand and to share the opportunity with farmers who have the infrastructure and drive to diversify their farming operation with non-GMO production.

We recognize there are challenges involved. But we want to see you be successful and reward you for your efforts.

You can earn a premium for food-grade non-GMO soybeans that meet the 99.5% non-GMO purity threshold. Simply:

Sign a grower agreement with Cargill, including the identity preserved (IP) checklist.

Grow your non-GMO crop.

Store your non-GMO grain on-farm, separate from your conventional production until we call for delivery.

Produce your seed receipts if requested.

Receive your premium.

We contract non-GMO soybeans through our Cedar Rapids, IA and Bloomington, IL locations and through the Solae Gibson City, IL facility.
